Safe Harbor Statement

The following is intended to outline our general product direction. It is intended for information purposes only and may not be incorporated into any contract. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described for Oracle's products may change and remains at the sole discretion of Oracle Corporation.

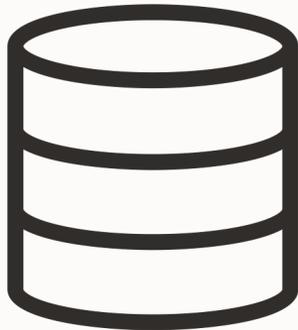

of the
FORTUNE Global 100 Companies
rely on the Oracle Database

Oracle Data Management Objectives

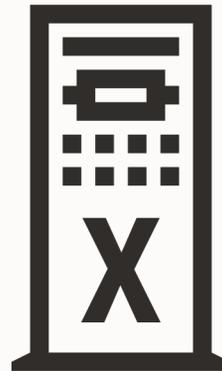

Lead database software, infrastructure and cloud innovation

Software

Fastest, most scalable, secure & reliable converged SQL database

Infrastructure

Best platform for transactional, analytic & mixed workloads

Cloud

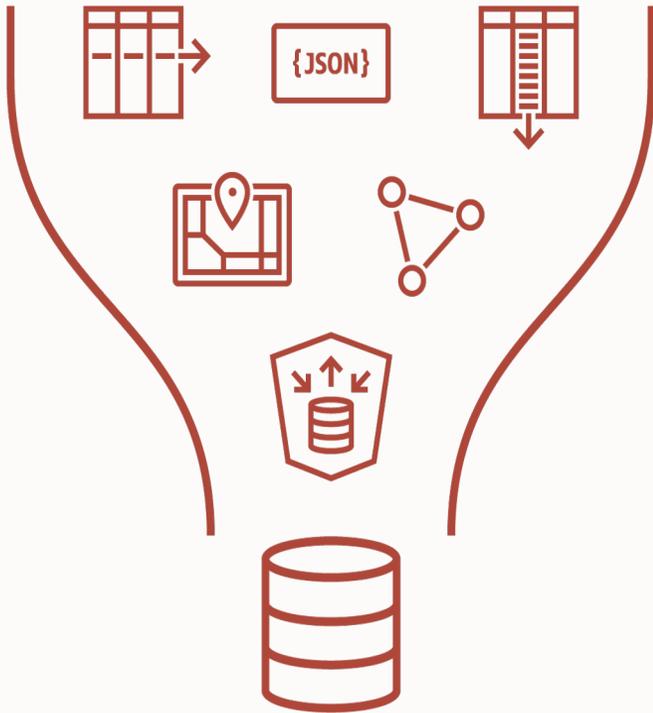

Automate everything for DBAs, developers, data analysts & scientists

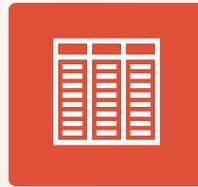

Oracle Database

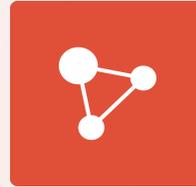

A Converged **Multi-Model, Multi-Workload** Data Platform

Best-of-Breed Relational, JSON, Cube, Graph, Spatial, Text, Event, Blockchain

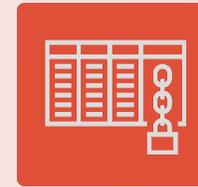

Relational

Graph

Documents

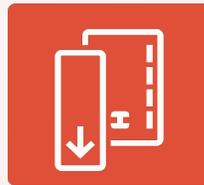

Blockchain

Geospatial

High Performance Transactions, Analytics, ML, IoT, Data Mesh, Multitenant

Transactional

Analytical

IoT

Machine Learning

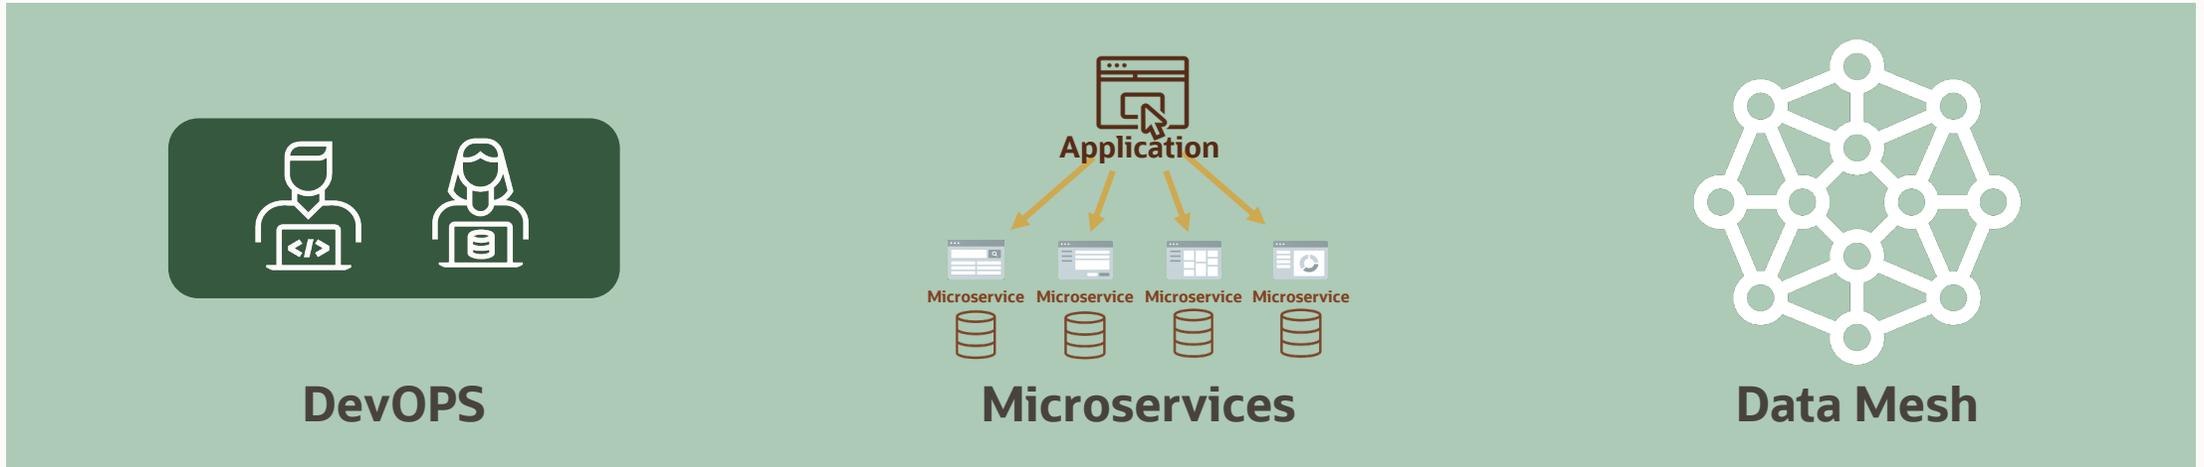

Microservices

Cross-model operations and **deep optimizations** enable you to easily create value across all your data

Oracle Database

Fulfilling the **new challenges** for Data Architecture

- Oracle provides the ability to **simplify the orchestration of database** deployments using Kubernetes
- Oracle Multitenant implements the container **concept natively** in the database
- Implement Data-as-a-Service using Oracle Rest Data Services
- Use Transactional Event Queues between Oracle databases & Kafka for heterogeneous services
- Use GoldenGate to **enable Data Mesh** and publish and consume data in real-time

Low-Code - Database Native APEX

Oracle's free APEX low-code IDE dramatically simplifies App Dev

With APEX, enterprise Apps can be **generated rather than coded**

APEX **unifies the App Tier and Data Tier**

- Increases agility by eliminating the headaches of coding and managing middle-tiers
- No more app tier state or connection management, or mapping app types to DB types

Low-code simplicity enables tech savvy **domain experts** to **create their own apps** or Data Mesh “data products”, further decentralizing Tech

APEX Apps use Rest Data Services to communicate with other decentralized apps

Over 2 Million APEX Apps Exist Today
3K New APEX Apps Developed Every Day

Oracle Database

Keeping the data secured and available

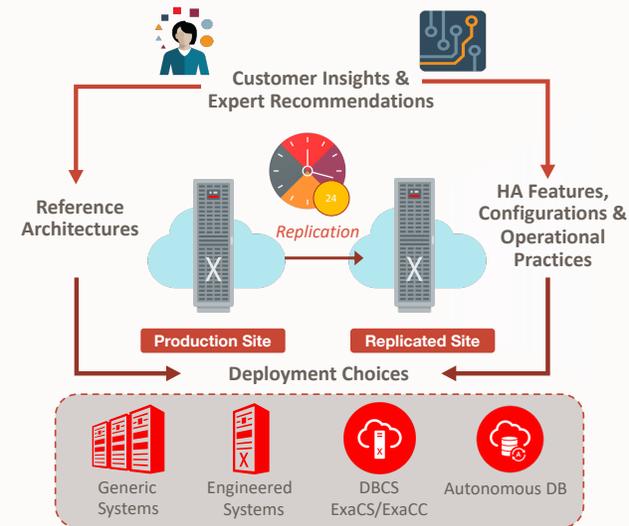

Multi-layer protection for data and applications

- **Built-in, integrated security** and secured by design approach
- Secures data and **establishes trust** for applications & users
- Mitigates risk and strengthens security posture with **defense in depth**
- Supports cybersecurity framework implementations (NIST, ISO, CIS, CARTA)

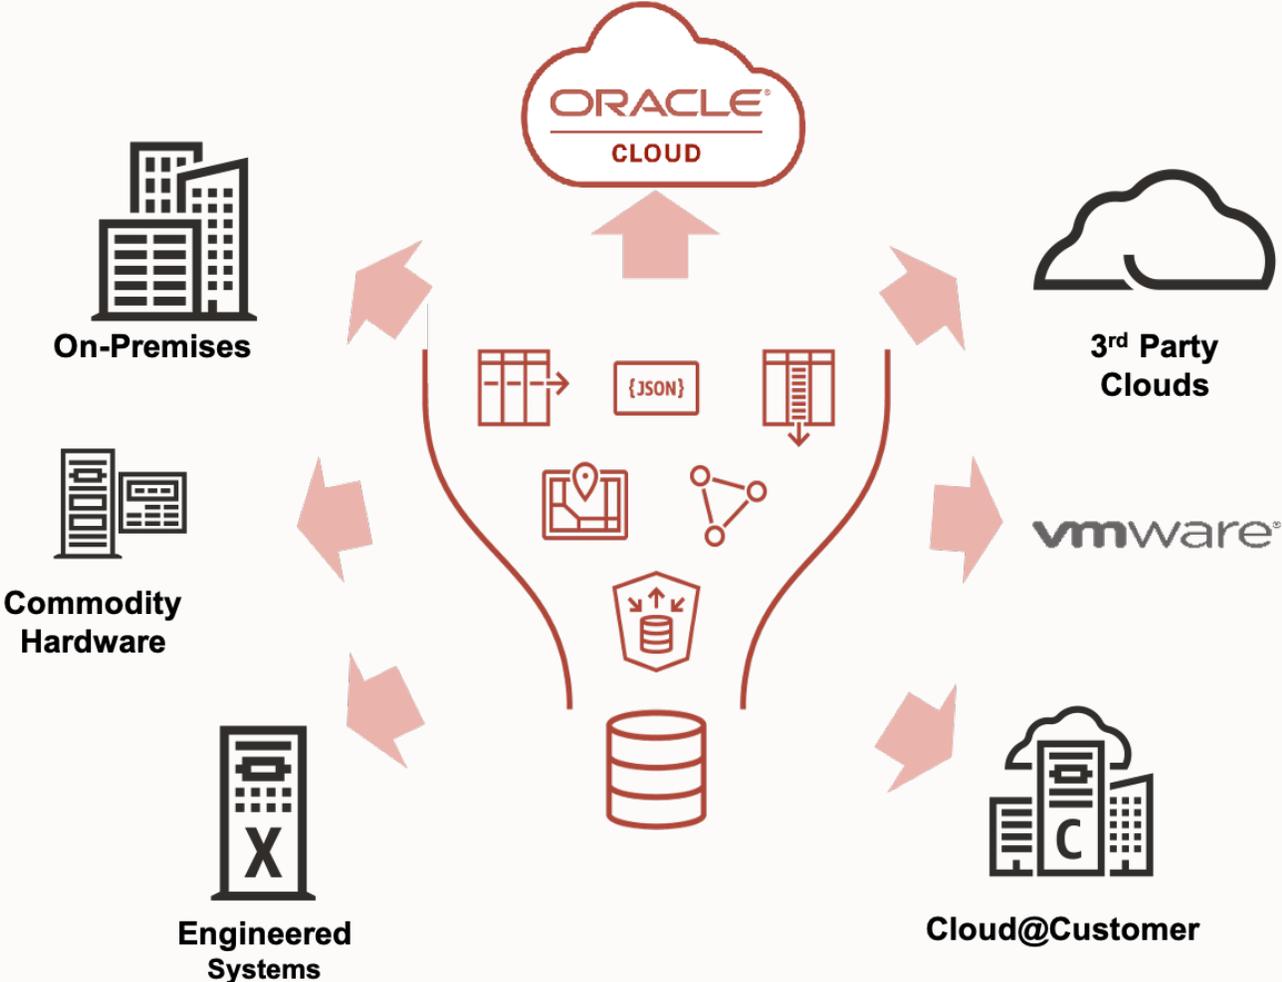

From single instance to 99.999% Availability

- Maximum Availability Architecture (MAA) provides architecture, configuration and best practices to address **all types of downtime**
- Solution for **every tier and flavor**: multiple data centers, clustering, replication
- **Oracle Exadata** is engineered to be **the highest performing** and most available platform for running Oracle Databases.

Oracle Database is available everywhere

Oracle's converged database - enabling the data-driven enterprise

Summary

Do more with less

A **unified approach** to data management means more opportunity for **data synergies**, and less maintenance overhead

Shorten time to value

Accelerate application development – with **easier data access** and support for the **latest development methodologies**

Modernize workloads

Flexible deployment options to meet your specific needs, and **ease of movement** between those deployment options
